Career Objective

I am a Software Engineer and competent programmer with a Master of Information Technology and over four years of experience focusing on **full-stack web development**, **software testing**, and **data analysis**. My skill set includes Python, Flask, Java and AWS for building and maintaining websites, as well as front-end expertise using TypeScript. I have hands-on experience with automated unit testing and manual testing, ensuring robust and reliable software performance. Additionally, I have worked on data engineering tasks, including data analysis, visualization, and generating reports to support business decision-making.

Academically, I graduated in the top 10% of my faculty and have a strong interest in artificial intelligence and virtual reality research. My passion for continuous learning drives me to explore cutting-edge technologies and apply them in practical settings. I am immediately available and eager to contribute my skills to new challenges.

Technical Skills

Deep-learning framework: Pytorch, TensorFlow

Front-End: HTML5, SCSS, Bootstrap, **TypeScript**, JavaScript, jQuery, ReactJS, Tailwindcss

Back-End: CodeIgniter, **Node.js**

Database: MySQL, DynamoDB, PostgreSQL

Frameworks: **React**, Flutter

Development Tools & Platforms: **Git**, GitHub, Google Colab, Jupiter notebook, Docker

Programming Languages: **Python**, **Java**, C, C#, PHP, Dart

Cloud: Amazon Web Services (**AWS**), API Gateway, AWS Lambda, S3

Education

Master of Information Technology

2020 - 2023

The University of Queensland, Brisbane

Special interest in Skills: Cascading Style Sheets (CSS) • HTML5 • Bootstrap • Python (Programming Language)

• *TypeScript • Flask • React.js • Amazon Web Services (AWS) • Docker • SQL*

Bachelor of Civil Engineer

2012 - 2016

Henan Polytechnic University, China

University Project

Event Prediction in Cricket Leagues via Deep Recurrent Architecture

The University of Queensland:

Mar 2022 – Jun 2022

- Implemented a deep RNN model to predict ball-by-ball events based on the Pytorch framework.
- Pre-Processing data by embeddings players using MLP, processed data feed into RNN, LSTM, GRU models for training.
- Hyperparameter tuning, using grid search for best test accuracy. Around 10% improvement compared with benchmarks.

Online learning Platform

The University of Queensland:

Mar 2020 - July 2020

- Implemented sever-side back-end service using **PHP** and CodeIgniter, Bootstrap framework along with SQL server.
- This website will take MVC 3-Tier architecture, Users can upload videos and add to Wishlist from their own study center. Ajax link server and client and design by Figma.

Employment History

Software Engineer—Fulltime

Sep 2023 – Sep 2025

Eevi, Brisbane

Key Responsibilities

- **Software development** : Working with an agile team to build new features, test and maintain the company's customized SaaS: a high availability 24x7 system of sensors, mobile apps for real-time coordination and communication in high-care nursing homes, using Python and AWS Serverless stack. (Flask, DynamoDB, API Gateway, AWS Lambda, S3, etc.)
- **web development** : Actively contribute in the design and implementation of the service's web-interface. (TypeScript, Django, React, Bootstrap, PostgreSQL), Developing upon various third-party APIs to configure, interact, and monitor lot health sensors on production scale.
- **data analysis**: Implementing solutions to automate business tasks and deploy them to AWS Lambda to ensure data integrity across different CRM services. writing SQL queries and utilizing Python for data manipulation and analysis, which supports maintaining cloud databases and generating insightful reports and dashboards.
- **Software Testing**: Conducting development and release system integration tests. Create a detailed test summary report to be shared with the client for handover to UAT. Executing test cases and logging results accurately. Working on unit testing in Django, I have utilized Django's testing framework to test methods for generating charts based on event data.

Achievements:

Conducted development and release system integration tests

Supported the company's Service Delivery team with internal ad-hoc requests such as data provisioning, data query, debugging, errors investigation, etc.

Data Engineer Intern

Nov 2021 - Mon 2022

NeuroPower Group, Brisbane

Key Responsibilities

Reviewed existing NeuroPower web application, using third-party API integration to connect website with MonkeyLearn AI platform. Translating technical details into clear, actionable insights for non-technical stakeholders, facilitating effective decision-making.

Achievements:

Played a key role in **managing and analysing data**, which will support our NeuroPower team to build the AI platform. Creating and maintaining detailed data visualizations, using Power BI. Proficiency in calling APIs (Rest, SOAP, GraphQL), ensuring smooth data integration and functionality across systems.

Other Employment

Team Member

Sep 2025 – Present

JB Hi-Fi, Sydney

Personal Attributes

- Strong communication skills, evidenced by my role as a university project lead where I regularly facilitated meetings between cross-functional teams. I ensured everyone was on the same page, resulting in streamlined workflows, reduced misunderstandings, and timely project completion.
- Solid problem-solving skills highlighted in my role as a technical support specialist. I effectively resolved complex student issues by analyzing root causes, proposing innovative solutions, and guiding students step-by-step to resolution.
